# AINavi-AOI-Industrial
AI AOI Pre-trained Models and Software

AINavi

Features

- Supports multiple AI inspection algorithms
- Visualized web model training interface
- Model fine-tuning and retraining
- Images dataset management system and labeling tools
- AI model management system
- Bulk testing reports for trained models
- Supports Windows and Linux
- Enables remote training
- Scalable AI computing infrastructure, supports multiple models and test items
- Royalty-free and Subscription (dongle free version) you can choose

Introduction

AINavi-AOI-Industrial is an AI model training software powered by Spingence. It is designed for use in automated optical inspection (AOI) applications and automated manufacturing. AINavi-AOI-Industrial software provides an easy graphical user interface that enables the quick application of AI in AOI applications. This software chooses the most suitable AI algorithm base for testing times and items. AINavi-AOI-Industrial comprises the following AI pre-trained models:

- Classification
- Object Detection
- Segmentation

An Industrial vision inspection software can fulfills all of your inspection needs with the following features:

- Data storage and index management system
- Data label and image pre-processing
- Model detection training and testing
- Detection engine deployment and update

Ordering Information
